"Cytoplasmic 3-hydroxy-3-methylglutaryl coenzyme A synthase from the
hamster. I. Isolation and sequencing of a full-length cDNA.";
J. Biol. Chem. 261:3710-3716(1986).

-i- FUNCTION: THIS ENZYME CONNDENSES ACETYL-COA WITH ACETOACETYL-COA
TO FORM HMG-COA, WHICH IS THE SUBSTRATE FOR HMG-COA REDUCTASE.

-i- CATALYTIC ACTIVITY: (S)-3-HYDROXY-3-METHYLGLUTARYL-COA + COA =
ACETYL-COA + H(2)O + ACETOACETYL-COA.

-i- PATHWAY: PRODUCTION OF MEVALONATE FROM HMG-COA PRIOR TO THE
SYNTHESIS OF STEROLS SUCH AS CHOLESTEROL AND ISOPRENOIDS.

-i- SUBCELLULAR LOCATION: CYTOPLASMIC.
                                                                                                                                                                                                                                                                                Cricetulus griseus (Chinese hamster).

         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score
